Abstract of JP8117168

PURPOSE: To provide a wiping cloth mounting base which is pressable with softness to a surface to be cleaned in spite of thin wiping cloth and has a good feeling of use at the time of cleaning by using a soft synthetic resin as a blank and integrally molding many projections for imparting elasticity on at least the rear surface. **CONSTITUTION:** A mop has the wiping cloth mounting base 2 for exchangeably mounting the wiping cloth 1 for wiping consisting of paper, non-woven fabric or woven fabric, etc., and is connected with a handle rod 3 for operation at the wiping cloth mounting base 2. The wiping cloth mounting base 2 is formed of the soft synthetic resin to a flat and slender planar shape. Two pieces of folding grooves 5, 5 are longitudinally formed in the opposite positions of the front and rear surfaces of the base. In addition, the base is provided with detaining parts 6 for detaining the ends of the wound wiping cloth 1 in the positions near the four corners of the front surface. The rear surface of the wiping cloth mounting base 2 is integrally formed at suitable intervals with many projections 10 having softness in such a manner that the wiping cloth 1 mounted thereon can be pressed to the part to be cleaned with the adequate elastic force.
